# **Botox®** (onabotulinumtoxinA)

(Intramuscular/Intradetrusor/Intradermal)

#### Document Number: IC-0238

#### Last Review Date: 05/04/2023

Date of Origin: 06/21/2011

Dates Reviewed: 09/2011, 12/2011, 03/2012, 06/2012, 09/2012, 12/2012, 02/2013, 03/2013, 06/2013, 09/2013, 12/2013, 03/2014, 03/2015, 06/2015, 09/2015, 12/2015, 03/2016, 06/2016, 09/2016, 12/2016, 03/2017, 06/2017, 09/2017, 12/2017, 03/2018, 06/2018, 10/2018, 04/2019, 07/2019, 09/2019, 12/2019, 01/2020, 05/2020, 08/2020, 03/2021, 05/2021, 05/2022, 05/2023

#### I. Length of Authorization <sup>65</sup>

- Coverage will be provided for 6 months and may be renewed.
- Preoperative use in Ventral Hernia may NOT be renewed.

#### II. Dosing Limits

#### A. Quantity Limit (max daily dose) [NDC Unit]:

- Botox 100 unit powder for injection: 1 vial per 84 days
- Botox 100 unit powder for injection: 5 vials once (for Ventral Hernia only)
- Botox 200 unit powder for injection: 2 vials per 84 days

#### B. Max Units (per dose and over time) [HCPCS Unit]:

| Indication                               | Billable Units | Per # days |
|------------------------------------------|----------------|------------|
| Blepharospasm                            | 200            | 84         |
| Cervical Dystonia                        | 300            | 84         |
| Strabismus                               | 100            | 84         |
| Esophageal Achalasia                     | 100            | 168        |
| Adult Upper Limb Spasticity              | 400            | 84         |
| Adult Lower Limb Spasticity              | 400            | 84         |
| Chronic Migraine                         | 200            | 84         |
| Severe Primary Axillary Hyperhidrosis    | 100            | 112        |
| Sialorrhea                               | 100            | 84         |
| Neurogenic Bladder/Detrusor Overactivity | 200            | 84         |
| Overactive Bladder                       | 100            | 84         |
| Chronic Anal Fissures                    | 100            | 84         |
| Palmar Hyperhidrosis                     | 200            | 168        |
| Pediatric Upper Limb Spasticity          | 200            | 84         |
| Pediatric Lower Limb Spasticity          | 300            | 84         |
| Laryngeal Dystonia                       | 100            | 84         |
| Hemifacial Spasms                        | 100            | 84         |
| Oromandibular Dystonia                   | 200            | 84         |
| Ventral Hernia                           | 500            | N/A        |
| Temporomandibular Disorders              | 100            | 84         |

#### III. Initial Approval Criteria<sup>1</sup>

Coverage is provided in the following conditions:

• Patient is at least 18 years of age (unless otherwise specified); AND

### Universal Criteria<sup>1</sup>

- Patient evaluated for any disorders which may contribute to respiratory or swallowing difficulty; **AND**
- Patient does not have a hypersensitivity to any botulinum toxin product; AND
- Patient does not have an active infection at the proposed injection site; AND
- Patient is not on concurrent treatment with another botulinum toxin (i.e., abobotulinumtoxinA, incobotulinumtoxinA, rimabotulinumtoxinB, etc.); **AND**

# Blepharospasms † $\Phi$ <sup>1</sup>

• Patient is at least 12 years of age

# Cervical Dystonia † $\Phi$ <sup>1,44</sup>

- Patient is at least 16 years of age; AND
- Patient has a history of recurrent involuntary contraction of one or more muscles in the neck and upper shoulders; **AND** 
  - $\circ$  Patient has sustained head tilt;  $\mathbf{OR}$
  - Patient has abnormal posturing with limited range of motion in the neck

# Strabismus † $\Phi^{1}$

• Patient is at least 12 years of age

#### Spastic Conditions 1,22-25,32,33,44,46,49-51,69

- Patient has one of the following:
  - Upper/Lower Limb spasticity in adults (i.e., used post-stroke for spasms) **†**
  - Pediatric upper limb spasticity in patients at least 2 years of age (i.e., used post-stroke for spasms or for spasms related to cerebral palsy)  $\dagger \Phi$
  - Pediatric lower limb spasticity in patients at least 2 years of age **†**
  - Spasticity due to multiple sclerosis or Schilder's disease **‡**
  - Acquired spasticity secondary to spinal cord or brain injuries **‡**
  - Spastic Plegic conditions including Monoplegia, Diplegia, Hemiplegia, Paraplegia (including Hereditary spastic paraplegia) and Quadriplegia ‡
  - Hemifacial Spasm **‡**

©2016 Health New England, Inc.

#### Severe Primary Axillary Hyperhidrosis † 1,15,52,59,60,79

- Patient has tried and failed ≥ 1 month trial of a topical agent (i.e., 20% aluminum chloride, glycopyrronium, aluminum zirconium trichlorohydrate, etc.); AND
  - Patient has a history of medical complications such as skin infections or significant functional impairments; OR
  - Patient has had a significant burden of disease or impact to activities of daily living due to condition (e.g., impairment in work performance/productivity, frequent change of clothing, difficulty in relationships and/or social gatherings, etc.)

#### Prophylaxis for Chronic Migraines † 1,6,7,53,56,58,75

- Patient is utilizing prophylactic intervention modalities (i.e., avoiding migraine triggers, pharmacotherapy, behavioral therapy, physical therapy, etc.); **AND**
- Patient has a diagnosis of chronic migraines defined as 15 or more headache (tension-typelike and/or migraine-like) days per month for > 3 months; **AND** 
  - Patient has had at least five attacks with features consistent with migraine (with and/or without aura)§; AND
  - On at least 8 days per month for > 3 months:
    - Headaches have characteristics and symptoms consistent with migraine§; OR
    - Patient suspected migraines are relieved by a triptan or ergot derivative medication; AND
  - Patient has failed at least an 8-week trial of any two oral medications for the prevention of migraines (see list of migraine-prophylactic medications below for examples ±) prior to initiation of onabotulinumtoxinA

#### Esophageal Achalasia ‡ <sup>3-5,68,70</sup>

- Patient is at high risk of complication from pneumatic dilation, surgical myotomy, or peroral endoscopic myotomy (POEM); **OR**
- Patient has had treatment failure with pneumatic dilation, surgical myotomy, or POEM;
   OR
- Patient has had perforation from pneumatic dilation; OR
- Patient has an epiphrenic diverticulum or hiatal hernia; OR
- Patient has esophageal varices

#### Focal Dystonias ‡ <sup>23-25,34-41,71-73</sup>

- Focal upper limb dystonia
  - $\circ$   $\;$  Patient has functional impairment;  $\mathbf{OR}$
  - o Patient has pain as a result
- Laryngeal dystonia

©2016 Health New England, Inc.

Page 3 of 25

- Oromandibular dystonia
  - Patient has functional impairment; OR
  - Patient has pain as a result

### Sialorrhea associated with Neurological Disorders ‡ <sup>16-20,42,43</sup>

- Patient has a history of troublesome sialorrhea for at least a 3 month period; AND
  - Patient has Parkinson's disease; **OR**
  - $\circ$  Patient has severe developmental delays;  $\mathbf{OR}$
  - Patient has cerebral palsy; **OR**
  - Patient has amyotrophic lateral sclerosis (ALS)

#### Incontinence due to Detrusor Overactivity † 1,55,64,67

- Patient is at least 5 years of age; AND
- Patient does not have a current, untreated urinary tract infection; AND
- Patient has detrusor overactivity associated with a neurologic condition (i.e., spinal cord injury, multiple sclerosis, etc.) that is confirmed by urodynamic testing; **AND**
- Patient has failed a 1 month or longer trial of **two** medications from either the antimuscarinic (i.e., darifenacin, fesoterodine, oxybutynin, solifenacin, tolterodine or trospium) or beta-adrenergic (i.e., mirabegron) classes

# Overactive Bladder (OAB) † 1,55

- Patient does not have a current, untreated urinary tract infection; AND
- Patient has symptoms of urge urinary incontinence, urgency, and frequency; AND
- Patient has failed a 1 month or longer trial of **two** medications from either the antimuscarinic (e.g., darifenacin, fesoterodine, oxybutynin, solifenacin, tolterodine or trospium, etc.) or beta-adrenergic (e.g., mirabegron, vibegron, etc.) classes

#### Severe Palmar Hyperhidrosis ‡ <sup>21,52,74</sup>

- Patient has tried and failed ≥ 1 month trial of a topical agent (i.e., 20% aluminum chloride, etc.); AND
- Patient has failed with iontophoresis; AND
  - $\circ~$  Patient has a history of medical complications such as skin infections or significant functional impairments;  $\mathbf{OR}$
  - o Patient has had a significant impact to activities of daily living due to condition

#### Chronic Anal Fissure ‡ <sup>27-31,47,61-63</sup>

• Other causes of disease have been ruled out (i.e., Crohn's Disease, etc.); AND

©2016 Health New England, Inc.

- Patient has failed on non-pharmacologic supportive measures (i.e., sitz baths, psyllium fiber, bulking agents, etc.); **AND**
- Patient has tried and failed  $a \ge 1$  month trial of conventional pharmacologic therapy (i.e. oral/topical nifedipine, diltiazem, and/or topical nitroglycerin, bethanechol, etc.)

#### Ventral Hernia ‡ 65,66

- Patient has a large ventral hernia with loss of domain or contaminated ventral hernia; **AND**
- Used preoperatively in patients scheduled to receive abdominal wall reconstruction (AWR)

#### Temporomandibular disorders (TMD) ‡ 76-78

- Patient has a diagnosis of TMD with unilateral painful symptoms (i.e., pain upon opening the mouth and chewing, headache, joint clicking/noise, etc.) lasting > 3 months; **AND**
- Patient has tried and failed a 3 month trial of conventional noninvasive therapy (i.e., cognitive behavior therapy, pharmacotherapy, physical therapy, occlusal devices, etc.)

#### $\dagger$ FDA Approved Indication; $\ddagger$ Literature Supported Indication; $\Phi$ Orphan Drug

#### ± Migraine-Prophylaxis Oral Medications (list not all-inclusive)<sup>6,53,58</sup> Antidepressants (e.g., amitriptyline, fluoxetine, nortriptyline, etc.) Beta blockers (e.g., propranolol, metoprolol, nadolol, timolol, atenolol, pindolol etc.) Angiotensin converting enzyme inhibitors/angiotensin II receptor blockers (ex. lisinopril, candesartan, etc.) Anti-epileptics (e.g., divalproex, valproate, topiramate, etc.) Calcium channels blockers (e.g., verapamil, etc.) § Migraine Features 53,58,75 Migraine without aura At least five attacks have the following: Headache attacks lasting 4-72 hours (untreated or unsuccessfully treated) 0 Headache has at least two of the following characteristics: 0 Unilateral location \_ **Pulsating quality** Moderate or severe pain intensity Aggravation by or causing avoidance of routine physical activity (e.g., walking or climbing stairs); AND During headache at least one of the following: Nausea and/or vomiting Photophobia and phonophobia Migraine with aura At least two attacks have the following: One or more of the following fully reversible aura symptoms: Visual Sensory Speech and/or language Motor Brainstem \_ Retinal; AND At least three of the following characteristics: At least one aura symptom spreads gradually over ≥5 minutes Two or more symptoms occur in succession Each individual aura symptom lasts 5 to 60 minutes

©2016 Health New England, Inc.

Page 5 of 25

- At least one aura symptom is unilateral
- At least one aura symptom is positive (e.g., scintillations and pins and needles)
- The aura is accompanied, or followed within 60 minutes, by headache

# IV. Renewal Criteria<sup>1</sup>

Coverage can be renewed based upon the following criteria:

- Patient continues to meet universal and indication specific criteria as identified in section III; **AND**
- Absence of unacceptable toxicity from the drug. Examples of unacceptable toxicity include: symptoms of a toxin spread effect and clinically significant effects with pre-existing neuromuscular disorders (i.e., asthenia, generalized muscle weakness, diplopia, ptosis, dysphagia, dysphonia, dysarthria, urinary incontinence, swallowing/breathing difficulties, etc.), severe hypersensitivity reactions (i.e., anaphylaxis, serum sickness, urticaria, soft tissue edema, and dyspnea, etc.), severe pulmonary effects (i.e., reduced pulmonary function), corneal exposure/ulceration, retrobulbar hemorrhage, bronchitis/upper-respiratory tract infections, autonomic dysreflexia, urinary tract infection, and urinary retention, etc.; AND
- Disease response as evidenced by the following:

# Blepharospasms <sup>1</sup>

• Improvement of severity and/or frequency of eyelid spasms

#### Cervical Dystonia<sup>1</sup>

- Improvement in the severity and frequency of pain; AND
- Improvement of abnormal head positioning

#### Strabismus 1

• Improvement in alignment of prism diopters compared to pre-treatment baseline

# Focal Upper/Lower Limb Spasticity <sup>1</sup>

• Decrease in tone and/or resistance, of affected areas, based on a validated measuring tool (i.e., Ashworth Scale, Physician Global Assessment, Clinical Global Impression (CGI), etc.)

#### Hemifacial Spasms 32,33,49-51

• Decrease in frequency and/or severity of spasm, or a decrease in tone and/or improvement in asymmetry to the affected side of the face

# Severe Primary Axillary Hyperhidrosis 1,59

- Significant reduction in spontaneous axillary sweat production; AND
- Patient has a significant improvement in activities of daily living

©2016 Health New England, Inc.

Page 6 of 25

#### Prophylaxis for Chronic Migraines 1,53,56,58

- Significant decrease in the number, frequency, and/or intensity of headaches; AND
- Improvement in function; **AND**
- Patient continues to utilize prophylactic intervention modalities (i.e., pharmacotherapy, behavioral therapy, physical therapy, etc.)

#### Esophageal Achalasia <sup>3-5,68,70</sup>

- Improvement and/or relief in symptoms (i.e., dysphagia, pain, etc. ); OR
- Improvement in esophageal emptying as evidenced by functional testing

#### Focal Dystonias <sup>23-25,34-41,71</sup>

- Focal upper limb dystonia
  - Improvement in pain and/or function
- Laryngeal dystonia
  - Improvement in voice function or quality
- Oromandibular dystonia
  - Improvement in pain and function

#### Sialorrhea associated with Neurological Disorders <sup>16-19,42,43</sup>

• Significant decrease in saliva production

#### Incontinence due to Detrusor Overactivity<sup>1</sup>

- Patient does not have a current, untreated urinary tract infection; AND
- Significant improvements in weekly frequency of incontinence episodes; AND
- Patient's post-void residual (PVR) periodically assessed as medically appropriate

#### Overactive Bladder (OAB)<sup>1</sup>

- Patient does not have a current, untreated urinary tract infection; AND
- Significant improvement in daily frequency of urinary incontinence or micturition episodes and/or volume voided per micturition; **AND**
- Patient's post-void residual (PVR) periodically assessed as medically appropriate

#### Severe Palmar Hyperhidrosis 52,74

- Significant reduction in spontaneous palmar sweat production; AND
- Patient has a significant improvement in activities of daily living

# Chronic Anal Fissure 27-31,47,61-63

• Complete healing of anal fissure; **OR** 

©2016 Health New England, Inc.

Page 7 of 25

• Symptomatic improvement of persistent fissures

#### Spastic Conditions, Other (Plegias, etc.) 22-25,32,33,44,46,49-51,69

• Decrease in tone and/or resistance, of affected areas, based on a validated measuring tool (i.e., Ashworth Scale, Physician Global Assessment, Clinical Global Impression (CGI), etc.)

#### Ventral Hernia 65,66

• May not be renewed

#### Temporomandibular Disorders (TMD) 76-78

• Patient has significant improvement in symptoms (i.e., pain upon opening the mouth and chewing, headache, joint clicking/noise, etc.)

# V. Dosage/Administration 1,17,21,25,27-30,32,36-38,50,52,65,70,72-74,78

| Indication        | Dose                                                                            |
|-------------------|---------------------------------------------------------------------------------|
| Blepharospasm     | 1.25 to 2.5 Units (0.05 to 0.1 ml per site) injected into each of 3 sites per   |
|                   | affected eye every three months. There appears to be little benefit obtainable  |
|                   | from injecting more than 5 Units per site. The effect of treatment lasts an     |
|                   | average of 12 weeks. Cumulative dose in 30 days should not exceed 200 units.    |
| Cervical Dystonia | 198 to 300 Units divided among the affected muscles. No more than 50 Units      |
|                   | per site. May re-treat in 12 weeks.                                             |
| Strabismus        | Based on muscle(s) affected, 1.25 to 5 Units in any one muscle initially.       |
|                   | Subsequent doses may be increased up to two-fold compared to previously         |
|                   | administered dose. No more than 25 Units in any one muscle for recurrent        |
|                   | cases. The effect of treatment usually lasts about 12 weeks.                    |
| Esophageal        | 100 Units (20 to 25 Units per quadrant) per administration, dose may be         |
| Achalasia         | repeated in 6 months (24 weeks).                                                |
| Upper Limb        | Dosing in initial and sequential treatment sessions should be tailored to the   |
| Spasticity        | individual based on the size, number and location of muscles involved,          |
|                   | severity of spasticity, the presence of local muscle weakness, the patient's    |
|                   | response to previous treatment, or adverse event history with Botox. For        |
|                   | pediatrics, localization of the involved muscles with techniques such as needle |
|                   | electromyographic guidance, nerve stimulation, or ultrasound is                 |
|                   | recommended.                                                                    |
|                   | Adults                                                                          |
|                   | – In clinical trials, doses ranging from 75 to 400 Units were divided among     |
|                   | selected muscles at a given treatment session. Re-treat no sooner than every    |
|                   | 12 weeks.                                                                       |
|                   | Pediatrics                                                                      |
|                   | – The recommended dose for treating pediatric upper limb spasticity is 3        |
|                   | Units/kg to 6 Units/kg divided among the affected muscles. The total dose of    |
|                   | Botox administered per treatment session in the upper limb should not           |
|                   | exceed 6 Units/kg or 200 Units, whichever is lower. The maximum                 |

©2016 Health New England, Inc.

| Indication                                     | Dose                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                | cumulative dose should not exceed the lower of 10 Units/kg body weight or                                                                                                                                                                                                                                                                                                                                                                     |

| disorders (TMD)                                                         | lateral pterygoid muscle, anterior temporalis muscle) for a total of 100 Units |  |
|                                                                         | every 12 weeks                                                                 |  |
| All other indications                                                   | Not to exceed a cumulative dose of 400 Units (for one or more indications)     |  |
| (unless otherwise                                                       | every 12 weeks.                                                                |  |
| specified)                                                              |                                                                                |  |
| When initiative tweater and the lowest reserves and does should be used |                                                                                |  |

- $\;$  When initiating treatment, the lowest recommended dose should be used.
- In treating adult patients for one or more indications, the maximum cumulative dose should not exceed 400 Units, in a 3-month (12-week) interval (unless used for Ventral Hernia).
- In treating pediatric patients, the total should not exceed the lower of 10 Units/kg body weight or 340 Units, in a 3-month (12-week) interval.
- Unless otherwise stated, re-treatment should occur no sooner than 12 weeks from the prior injection.
- Units of Botox are specific to the preparation and assay method utilized and are not interchangeable with other preparations of botulinum toxin products and cannot be compared to or converted into units of any other botulinum toxin products

# VI. Billing Code/Availability Information

#### HCPCS Code:

• J0585 – Injection, onabotulinumtoxinA, 1 unit; 1 billable unit = 1 unit

NDC:

- Botox 100 unit powder for injection; single-dose vial: 00023-1145-xx
- Botox 200 unit powder for injection; single-dose vial: 00023-3921-xx

Dual coding requirements:

• Primary G and M codes require a secondary G or I code in order to be payable

#### Appendix 2 – Centers for Medicare and Medicaid Services (CMS)

Medicare coverage for outpatient (Part B) drugs is outlined in the Medicare Benefit Policy Manual (Pub. 100-2), Chapter 15, §50 Drugs and Biologicals. In addition, National Coverage Determination (NCD), Local Coverage Determinations (LCDs), and Local Coverage Articles (LCAs)

©2016 Health New England, Inc.

Page 23 of 25  $\,$ 

may exist and compliance with these policies is required where applicable. They can be found at: <u>https://www.cms.gov/medicare-coverage-database/search.aspx</u>. Additional indications may be covered at the discretion of the health plan.

Medicare Part B Covered Diagnosis Codes (applicable to existing NCD/LCD/LCA):

| Jurisdiction(s): 6 & K                                                                                                                                                              | NCD/LCD/LCA Document(s): A52848 |  |  |  |  |  |
